# ACCESSORIES

*Accessorizing is key to an upgraded experience.*

---

## INSERTS

Commonly made from quartz, these little bucket-like discs pack some perks. They create a barrier that takes the heat and keeps your banger like new. They're also super easy to clean- just soak it in some iso and it's as good as new.

---

## TERP PEARLS

If we had to pick just one accessory, pearls would probably be it. The balls made from quartz or ruby do a hell of a job dispersing both heat and the concentrates throughout the bucket for ultimate taste and consumption. Oh yeah, and they look cool while doing it.

---

## DABBERS

No matter what type you're working with, concentrates are sticky. Dabbers are tools made from steel, glass, or titanium, designed to grab and manage your concentrates without a lot of waste. Dabbers come in all shapes and sizes to cater to your type of extract and the size of your dab.

## DAB TOOLS

## CARB CAP

*Helps you clear your dab.*

This essential tool is made from heat resistant materials like glass, quartz, and titanium, and come in a variety of styles. The best cap for you depends on the size and style of your nail because a cap can only function with a compatible nail. And, if you plan on using accessories like terp pearls, you'll need a special cap for that!

**A carb cap** traps and retains heat, modifies airflow, and improves convection at lower temperatures. By restricting airflow and preserving temperature, carb caps allow concentrates to vaporize at lower temperatures, improving the taste and quality of your dab.

## THE ANATOMY OF A DAB SET UP

*What does it take to dab like a pro? A few essential tools will set you straight with a solid set up.*

- A Rig:** Similar to a bong or water pipe, but it's built specifically for dabs.
- B Nail:** Functions just like a bowl piece and comes in different sizes and styles made from titanium, ceramic, glass, and the most popular, quartz.
- C Terp Pearls:** a popular accessory that helps with heat retention and extract distribution.

- D Carb Cap:** it's like a lid for your nail. It helps get the most from your extract.

*Not Pictured:*

**A heat source** like a torch or an electronic nail is needed to vaporize concentrates.

**A dabber** is a tool designed for handling your concentrates.

## HOW TO USE A CARB CAP

Place your carb cap on the nail after you've heated the bucket and dropped in your medicine with a dabber. Take a hit, exhale and repeat.

**Tip:** Don't leave the carb cap on the banger when you're finished dabbing! The heat can transfer and make your carb cap hot to the touch.
